SlotEase

slotease.prasanna.digital

From booking to revenue, in one workflow

Multi-tenant appointment booking SaaS for clinics and salons. Customers book online in 30 seconds, owners run the day from one dashboard, and double bookings never happen.

1 · CUSTOMER BOOKS (ANY PHONE, NO APP, NO LOGIN)

1 Choose a service

Haircut 30 min · ₹300
Prices and durations set by the owner

2 Pick a free slot

Only real free times from working hours, breaks and bookings

3 Name and phone

Two fields. Returning customers are recognised by phone

Confirmed

Booking ID, email confirmation and Add to calendar

`APT-20261010-0007`

POST /public/{business}/bookings

2 · SLOTEASE BOOKING ENGINE

Every booking checked in one database transaction

Real-time slots

Working hours minus breaks and existing bookings, in the business's timezone

Zero double bookings

Row lock + unique index + PostgreSQL EXCLUDE constraint. The loser gets 409 SLOT_TAKEN

Tenant isolation

Every query is scoped to the signed-in business. Other tenants' data returns 404

3 · BUSINESS OWNER

Run the day from one dashboard

- Today's bookings with Completed / No-show in one tap
- Week calendar on tablet and desktop, day list on phone
- Customer history, repeat visits and no-shows
- Monthly reports: bookings, no-show rate, revenue estimate
- Walk-in and phone bookings from the same screen

4 · BILLING AND PLATFORM ADMIN

₹499/month after a 14-day trial

- Razorpay subscriptions, verified signatures, idempotent webhooks
- Admin panel with password + authenticator-app 2FA
- MRR, ARR and revenue by month, quarter, half-year and year
- Suspend, extend trials, fix bookings, read-only View as owner
- Every admin action in an audit log

BUILT WITH

Frontend
React 19 · TypeScript · Tailwind

Backend
FastAPI · Python 3.12 · SQLAlchemy

Data
PostgreSQL 16 · Redis

Delivery
Docker · Traefik HTTPS · GitHub CI

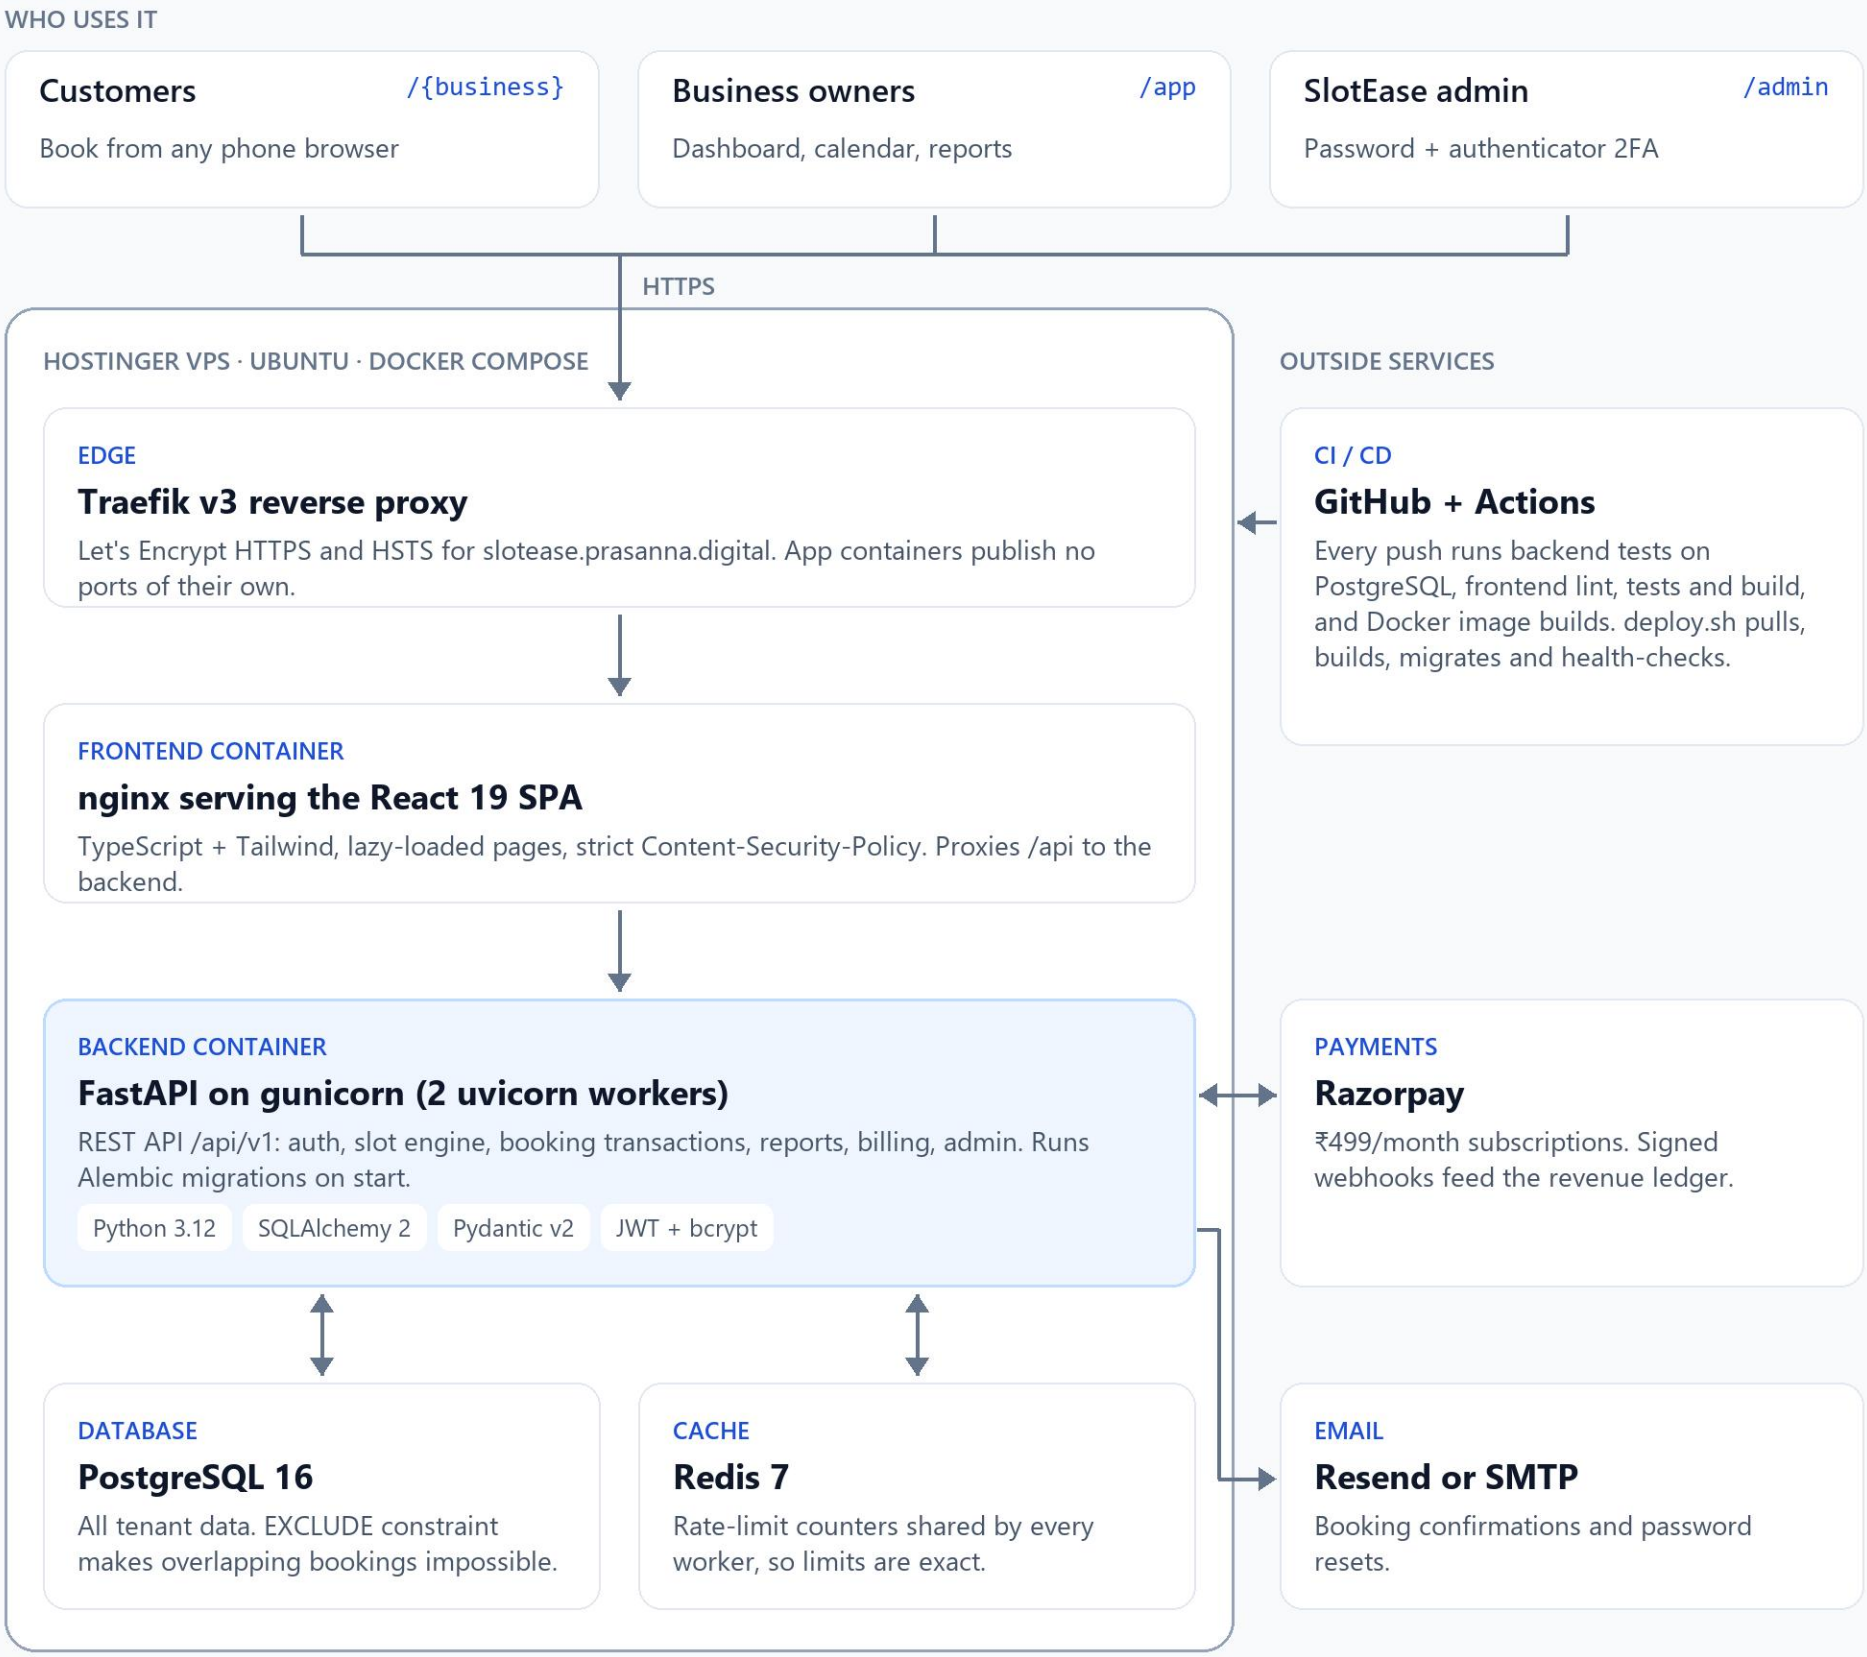

Responsive from 320px phones to large monitors · 400+ automated tests · Deployed on a Hostinger VPS

SlotEase

Architecture

How SlotEase runs in production

One small VPS, containerised end to end, with HTTPS, CI and database-level safety for every booking.

SECURITY BUILT IN

- ✓ Passwords hashed with bcrypt
- ✓ 30-min access tokens, rotating refresh
- ✓ Every query scoped to one business
- ✓ Admin 2FA and a full audit log
- ✓ Rate limits on sign-in and booking
- ✓ Backend runs as non-root, code read-only
